

The Oswego Times wants to know
man has torticollis, ankylosis of the radius,
paralyzation of the iter ateria ad quartem,
ventriculum, obliteration of the levator labii
superioris aliquinasi and besides don't feel very
well himself, whether he would be exempt from
the draft? Will somebody tell?

Canadians that have passed themselves off,
in Vermont, three different times as substitutes,
are riding about the streets of Montreal with
fast horses, and segars in their mouths.
